## EDUCATION

### SOFTWARE ENGINEERING

#### PRINCESS SUMAYA UNIVERSITY

📅 10/2018 - 06/2023

- C++
- System Analysis And Design
- advanced java
- Software Requirements Analysis
- Software Design and Architecture
- Software Quality Assurance and Testing
- Software Project Management
- Mobile Application Development

## EXPERIENCE

### SOFTWARE DEVELOPER INTERN

#### Specialized Technical Services (STS)

📅 02/2023 - 05/2023 📍 Amman, Jordan

🌐 <https://www.stsarabia.com/>

- project testing and maintenance
- back-end development
- front-end development

## PROJECTS

### Danger Zone

📅 10/2023

We created a citizen safety-focused Flutter application that utilizes a Python server for scraping news articles. The app provides real-time alerts on potential dangers based on the user's proximity. Key components include the mobile app, which manages geofencing events, and the Python server, which collects relevant safety information from news sources. Our team collaborated on designing the app's functionality, analyzing news articles, and implementing geofences for accurate danger detection. The app aims to enhance user safety by delivering timely notifications within their vicinity.

### 21 Cards Game

📅 2022

In this Java project, I developed a game based on the "21 Card Trick." The game deals a deck of 21 cards, and the player selects one without revealing it. Through three trials, the program uses strategies to guess the player's card. After each guess, the player provides feedback on which stack the card is in, and based on that feedback, the program makes a guess to determine the player's card.

### The Small Store

📅 2022

Our course project involved developing an application to sell printers and ink with a cart and login feature. We implemented a biometric login option on Android mobile phones using Kotlin for added security.
